

## How Does Your Team Perform?

### Summary

Constructing a team which can perform effectively has become an essential issue to many team leaders and companies. They are also longing to know how to assess teamwork level as well as spotting the deficiencies of the team and strengthening them. In our article, we first construct the passing network of the soccer team Huskie in last season. Some team formations are also drawn from the network by filtering different threshold of the edges. Four graphs are given to present the team performance on both micro and macro aspect of the team and time. We also quantify some teamwork indicators and develop the Neural Network Teamwork Performance Model to evaluate teamwork. Next, in order to provide the coach with some optimal strategies and advice, we construct the Markov Decision Process to simulate a match with the state defined as the combination of time, ball's position and whether the player has the ball. Four classified events are defined as our action. After obtaining an optimal policy by MDP, we combine this model with the Neural Network Teamwork Performance Model to analyze whether our strategy is universally applicable or not by calculating the optimal strategy's teamwork level compared with the opponents' teamwork level. These strategies include more duel between  $x=70$  and  $x=90$  and strikers should appear more at the position which is very near to the goal of us. At last, we generalize our findings to all the teams in real life and offer some approaches to improve team performance.

## 8 Evaluate of the Mode

## 9 Strengths and weaknesses

Etiam euismod. Fusce facilisis lacinia dui. Suspendisse potenti. In mi erat, cursus id, nonummy sed, ullamcorper eget, sapien. Praesent pretium, magna in eleifend egestas, pede pede pretium lorem, quis consetetuer tortor sapien facilisis magna. Mauris quis magna varius nulla scelerisque imperdiet. Aliquam non quam. Aliquam porttitor quam a lacus. Praesent vel arcu ut tortor cursus volutpat. In vitae pede quis diam bibendum placerat. Fusce elementum convallis neque. Sed dolor orci, scelerisque ac, dapibus nec, ultricies ut, mi. Duis nec dui quis leo sagittis commodo.

### 9.1 Strengths

- **Applies widely**

This system can be used for many types of airplanes, and it also solves the interference during the procedure of the boarding airplane, as described above we can get to the optimization boarding time. We also know that all the service is automate.

- **Improve the quality of the airport service**

Balancing the cost of the cost and the benefit, it will bring in more convenient for airport and passengers. It also saves many human resources for the airline.

### Appendix A First appendix

In addition, your report must include a letter to the Chief Financial Officer (CFO) of the Goodgrant Foundation, Mr. Alpha Chiang, that describes the optimal investment strategy, your modeling approach and major results, and a brief discussion of your proposed concept of a return-on-investment (ROI). This letter should be no more than two pages in length.
